ELITE
COREGard™
ARCHITECTURAL PRODUCTS

Our CORE Advantages:

- **Family-Owned for 40 Years**
  In an industry increasingly controlled by financial institutions and large multi-national corporations, Elite is still a family owned & operated business that puts the customer first.

- **Made in America**
  We not only produce our products in the US, we also source locally to help ensure quality and protect American jobs. “Built right. Built here”

- **In-House Fabrication**
  Whether it’s fence, railing, gate hardware or one-off custom signs, we utilize the latest technology to manufacture and powder-coat virtually all our products in our MI facility to ensure quality.

- **Submittal Process**
  From pre-construction specifications and shop drawings to test reports and product samples, we supply the tools necessary to help you secure your next commercial project.

- **Focus on Value**
  While other companies sacrifice quality & reputation in order to continue the “race to the bottom” with pricing, our focus is on VALUE and producing a professional-grade product.

- **Multiple Locations**
  We can service our customers from either of our 3 locations in Florida, Tennessee or our corporate facility in Michigan.

- **Knowledgeable Team**
  Whether it’s production employees, administrative staff or members of our sales/customer service department, Elite is proud to have a veteran team of dedicated people to service our customers, including many with decades of experience in the industry.

Family Values. American Craftsmanship.

BRIDGEGard™ - ENGINEERED PEDESTRIAN RAILING SYSTEMS

When safety and security matter most, **Elite's BRIDGEGard Railing Systems** deliver dependable performance. Part of the **Elite COREGard Architectural Products** brand of **Elite Fence Products**, BRIDGEGard pedestrian bridge railings are engineered from heavy-duty aluminum components, including rails, pickets, and posts built for demanding environments. The system features robust 2" x 3-1/2" rails, 1" x 1" pickets and 4" x 4" posts for exceptional strength and stability. Custom architectural elements can also be produced to achieve a distinctive, tailored look.

Designed for long-lasting performance, BRIDGEGard railings resist rust, warping and cracking, all without the need for painting or ongoing maintenance. BRIDGEGard railings are powder coated to exceed AAMA 2604 standards for superior durability. BRIDGEGard pedestrian railings are fully tested and backed by a limited lifetime warranty.

- **Engineered for TESTED Performance**
- **Meets AASHTO LRFD* Requirements**
  **(American Association of State Highway Transportation Officials) (Load and Resistance Factor Design)*
- **3-Part Submittals Available**
- **Primary Application: Pedestrian Railing for Bridges**

ENTRYGard™ – ENGINEERED GATE/DOOR SYSTEMS

When safety and security are critical, **Elite's ENTRYGard** gate/door systems provide reliable, high-performance solutions. As part of the **Elite COREGard Architectural Products** brand of **Elite Fence Products**, ENTRYGard pedestrian gates are constructed from heavy-duty aluminum components designed to withstand demanding environments and climates. These doors/gates ship fully assembled and are available with pre-installed commercial-grade door hardware and various configurations of protective mesh.

Built for long-term durability, ENTRYGard railings resist rust, warping and cracking, eliminating the need for painting or ongoing maintenance. Each system is powder coated to exceed AAMA 2604 standards, ensuring exceptional finish performance. ENTRYGard doors/gates are engineered for critical infrastructure and are rigorously tested and backed by a limited warranty.

- **Engineered & Tested for Performance**
- **Multiple Hardware Options Available**
- **3-Part Submittals Available**
- **Applications Include: Municipal Buildings, Schools & Universities, Stadiums & Entertainment Complexes, Data Centers & Utility Companies, Apartment and Assisted Living Properties**

FALLGard™ - FALL PROTECTION FENCE SYSTEMS

When FALL PROTECTION is paramount for a property, **Elite's FALLGard Perimeter Fence Systems** deliver dependable performance. Part of the **Elite COREGard Architectural Products** brand of **Elite Fence Products**, FALLGard fences are certified through rigorous physical testing to meet ICC Chapter 16 and ASCE-7 requirements. FALLGard is engineered from heavy-duty aluminum components and built for high traffic, public environments such as retaining walls and commercial patios. FALLGard fence systems provide maximum security and protection without sacrificing the view.

Designed for long-lasting performance, FALLGard fences resist rusting, warping and cracking, all without the need for painting or ongoing maintenance. FALLGard fences are powder coated to exceed AAMA 2604 standards for superior durability. FALLGard fences backed by a limited lifetime warranty.

- **Engineered for TESTED Performance.**
- **Meets or Exceeds ICC Chapter 16 and ASCE-7 Requirements**
- **3-Part Submittals Available**
- **Applications: Retaining Walls, Rooftops and Commercial/ Retail Patios**

40 YEARS FAMILY OWNED EST. 1986

FALLGard™ - FALL PROTECTION FENCE SYSTEMS

FALLGard Key Standards:

Fall protection railings (guardrails) must comply with local building codes like IBC/IRC for safety.

Strength: Must withstand at least 200 lbs of force applied downward or outward within 2 inches of the top edge, at any point, without failure.

Building Codes (e.g., IRC/IBC): Often for retaining walls over 30 inches high (measured from footing bottom to top of wall) to protect the public. Also consult local codes.

FALLGard Safety Testing:

Elite uses rigorous, top-tier testing to evaluate the quality, safety, and performance of our FALLGard Fence Systems

FALLGard Key Requirements:

ASCE 7-10 Section 4.5.1 — Handrail and Guardrail Load Requirements

ASCE 7-10, Section 4.5.1 specifies the minimum design loads for handrail and guardrail systems to ensure they can safely resist both concentrated and distributed loads.

Key Load Requirements:
- **Single Concentrated Load:** The system must be designed to resist **200 lb** applied in **any direction** at **any point** along the handrail or top rail
- **Uniform Distributed Load:** The system must also resist **50 lb/ft** applied in **any direction** along the handrail or top rail
- **In Fill and Panel Fillers:** Intermediate rails (excluding the handrail) and panel fillers must withstand a **horizontally applied normal load of 50 lb** on an area **not exceeding 12 in × 12 in** including openings and spaces between rails.

Design Intent:
- The **200 lb point load** is intended to simulate a person pushing or leaning against the rail, while the **50 lb/ft uniform load** simulates pedestrian traffic or incidental contact along the rail
- The code focuses on **strength** rather than deflection, though deflection limits may be required by other standards or local codes

In Summary: ASCE 7-10 4.5.1 requires handrail/guardrail systems to resist a 200 lb point load in any direction and a 50 lb/ft uniform load (with exemptions for certain occupancies), plus specific requirements for intermediate rails and panel fillers, all to ensure structural safety and occupant protection.

IRC Chapter 16 — RESIDENTIAL Guards and Handrails

In the **2021 International Residential Code (IRC)**, guards and handrails are defined differently:
- **Guard —** a vertical barrier to prevent accidental falls from elevated walking surfaces.
- **Handrail —** a vertical member for grasping and stability when climbing stairs or ramps

Design Loads: IRC has long required 200 lb. in any direction at any point along the top for both guards and handrails This load must be resisted in all directions, including inward, to account for potential lateral forces

Key Takeaways:
- **Load Resistance:** 200 lb. in all directions at the top of the guard or handrail.
- **Inspection:** While push/pull tests are common, the 2021 IRC's load requirements mean structural capacity must be verified to the code's design load.

IBC Chapter 10 — COMMERCIAL Guard and Handrail Requirements

IBC Chapter 10 (Means of Egress) sets out the code requirements for guards and handrails to prevent falls and provide guidance during vertical travel.

Guards (IBC §1015)

Guards are required along **open-sided walking surfaces** where there is a vertical drop greater than **30 inches (762 mm)** within **36 inches (914 mm)** horizontally of the open edge
- **Minimum height:** 42 in (1,067 mm) in all occupancies, measured vertically from the adjacent walking surface
- **Exceptions:** Loading docks, audience side of stages, raised platforms for entertainment, fixed-guideway transit station platforms, and similar functional openings
- **Strength:** Must comply with Section 1607.9 (typical design loads: 50 plf along top, 200 lb concentrated force)
- **Openings:** Maximum sphere opening size is 4 in (102 mm)

ADA Secondary Handrails (IBC §1014)

Handrails are required for **stairways, ramps, stepped aisles, and ramped aisles**

Height:
- Stairs: 34–38 in (864–965 mm) above the nosing of the tread
- Ramps: 34–38 in above the ramp surface

Graspability: Smooth, rounded, and free of sharp edges; must be accessible to users

Continuity: Uninterrupted along the length of the stair or ramp; intermediate handrails may be required for wide stairways

Fittings: Should prevent rotation and allow for comfortable gripping

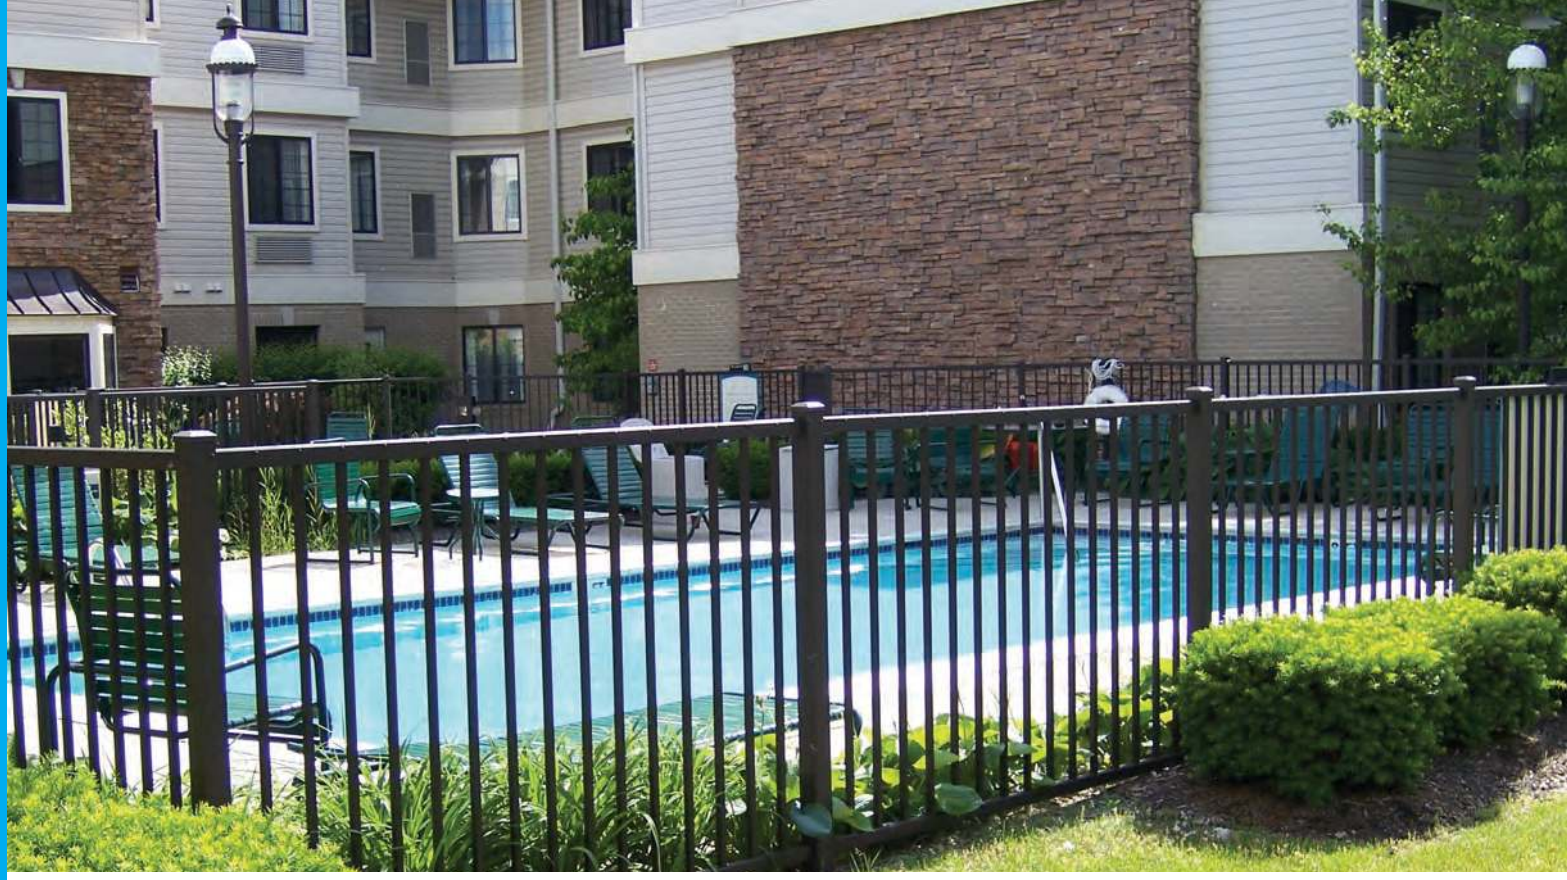

Strength: Must comply with Section 1607.9 for structural attachment

Key Differences
- **Guards** respond to **fall exposure** (drop > 30 in within 36 in) and are vertical barriers.
- **Handrails** respond to the **presence of stairs or ramps** and are horizontal elements for guidance and support

PRIVACYGard™ LOUVERED

Aluminum Privacy Fence, Gates and Enclosures

When privacy matters, choose **Elite PRIVACYGard Systems,** part of the **Elite COREGard Architectural Products** brand of **Elite Fence Products**. Our **LOUVERED** privacy solutions are built from premium aluminum with a minimum strength of 35,000 psi and powder coated to meet the highest AAMA 2604 standards. Our louvered systems provide full visual screening without sacrificing ventilation. The precision-angled louvers deflect direct views while promoting airflow, making it a smart solution for commercial and industrial applications. Designed for lasting performance, they resist rusting, warping and cracking, all without the need for painting or constant upkeep. Our aluminum PRIVACYGard Fences are tested and engineered using plated and in-ground posts, to ensure high-performance and reliability.

PRIVACYGard™ Dumpster Surrounds

Aluminum T&G and Louvered Styles

Elite Dumpster Surrounds are designed to enhance a property's appearance while keeping waste areas clean, secure, and out of sight. **Elite PRIVACYGard Dumpster Surrounds,** part of the **Elite COREGard Architectural Products** brand of **Elite Fence Products**, help maintain a polished look and prevent public access — an ideal solution for retail centers, commercial properties and multi-family communities where on-site trash storage is essential.

Our Dumpster Surrounds can be designed using our PRIVACYGard Louvered panels or our Aluminum T&G panels. These enclosures effectively conceal contents while still allowing for proper ventilation. Our surrounds are built from premium aluminum with a minimum strength of 35,000 psi and powder coated to meet the highest AAMA 2604 standards. Whether you're securing dumpsters, equipment or service areas, Elite's Axis heavy-duty hinges and gate latches provide dependable security with smooth, easy operation. Elite's PRIVACYGard Dumpster Surrounds are tested and engineered for strength, using both plated and in-ground post options to ensure professional-grade construction.

- **Provides Security & Durability While Concealing Waste Areas**
- **Low Maintenance - Resists Rust, Warping and Cracking**
- **Elite's Vast Line of AXIS Hinges Provide Exact Color Matching**
- **Engineered & Tested for Performance**
- **3-Part Submittals Available**

THE FENCER'S CHOICE!

The 10 Minute Fence Setting, Anchoring Cement!

Rapid Rock® is a fast-setting, high-strength anchoring cement that will not shrink. Rapid Rock can be used to set fence and gate posts in ground or in existing concrete slabs. Rapid Rock can be used "neat" (right out of the pail) or it can be mixed with a regular concrete mix to accelerate the setting time of Portland cement based concrete mixes. Set times will vary when Rapid Rock is mixed with a portland cement based concrete mix.

FEATURES & BENEFITS:

- **Pre-mixed, Ready to Use**
- **Sets Fence Post, Handrails and Anchor Bolts**
- **Non Shrink with Exceptional Bond Strength**
- **Not Affected by Continual Exposure to Water**
- **May be Placed at Temperatures Down to 20°F (-7°C)** ***if ACI 306 Cold Weather Concreting Standards are Followed***
- **Resists Freeze -Thaw Cycles and Deicing Chemicals**
- **Easy Open, Resealable Lid**
- **Saves Time and Money**
- **For Fence Posts, Decks, Mailboxes, Flag Poles**

Keep out of the reach of children. For professional use only. See back panel of pail for directions for safe use of this product.

Rapid Rock is Distributed by Elite Fence Products, Inc.

SPECS:

Pail Weight: 50 Lbs
Dimensions: 15"h x 12"w
UPC Code: 0 31187 01450

DIRECTIONS:

It is recommended that when setting fence posts, you mix Rapid Rock® with a portland cement based concrete mix. You should mix one part Rapid Rock® to 10 parts concrete mix. Add only enough water to make a plastic like consistency. DO NOT add too much water. Adding too much water will effect the setting time of Rapid Rock® and may effect the strength of the concrete/Rapid Rock mix. Mix only as much material as you can use in 5 minutes. After the mix has set, you CANNOT use more water to re temper the mix. You will have to mix a new batch. Make sure the post hole is adequate to support the fence. The hole should be 5 times the diameter of the post.
